This awarding affirms again the Group’s effort and contribution in implementing corporate social responsibility.

The “Caring Company” Scheme was launched in 2002 to award the corporates and organizations actively performing corporate social responsibilities. It aims at building strategic partnerships among businesses and social welfare organizations to promote creating a cohesive society. In early 2015, the Group has established a Corporate Social Responsibility Committee, which is mainly responsible for planning the corporate social responsibility development and activities of the Group, to achieve various criteria under the three adjudication scopes of “Caring for the Community”, “Caring for the Employee” and “Caring for the Environment”.

The Group also sponsored children from low income families, South Asian students and cancer patients to participate in the Dark Tour in Dialogue in the Dark Experiential Exhibition, extending our love and care to campus and the disadvantaged community.

Employees are highly-treasured assets of Chinlink, which advocates work-life balance and actively communicates with our employees. The Group encourages employees to bring along their families members to participate in recreational and community activities as well as collecting opinion from staff through various channels to improve employee-related policies, so as to foster a better working environment for our employees. Apart from “Caring for the Employee”, the Group is also committed in promoting environmental protection and implements several carbon emission reduction measures, like recycling unused paper, installing energy-conserving devices and publishing electronic version of corporate newsletter. In 2014, the Group was presented with a certificate by the Environment Bureau in recognition of the first-mover contributions and efforts in auditing the carbon footprints and disclosing the carbon data through the Carbon Footprint Repository. Chinlink is pleased to be one of the 64 awarded listed companies, assuring our effect made in reducing carbon emission.
